Dream Journal

Google Dream Image Search Engine

Search for images that capture your dreams for example on Google. Put them into a sequence that makes sense. Use voice recognition to directly capture your dream while searching for images. Afterwards use processing to manipulate the picture.

STEPS

1 Search for Images on Google Images, based on the content of your dream reports.

- Use Keywords or whole sentences to search for scenes
- Don‘t use symbolic pictures but try to find images that represent the point of view you had during the dream

2 Put the images into a sequence that makes sense for you.

3 Manipulate and cut the images till they represent the things you saw during your dream.

4 Add the corresponding keywords to the images.

Optional: Use voice-recognition to search for your images.

GOAL

How accurate can you rebuild your dream scenery or story with the help of (stock) images? How about the point of view?
